Real-Time Networking of Intelligent Servo Drives

Collaborating Organisations:

Australian Research Council.

Softronics Pty. Ltd

Objectives

The objective of this research program is the development of a real-time network for networking of intelligent servo drives.

Expected Outcomes

The expected outcome of the projects is a very high speed network utilising state-of the art networking technology and Digital Signal Processor (DSP) technology to provide advanced features such as dynamic configurability of axes and real-time data communications between them in a Flexible Manufacturing System (FMS) environment.

Researcher

Ravitha Jayalath, MEng student

Research Coordinators:

Assoc. Prof Romesh Nagarajah
Dr. Richard Dluzniak
